The Challenge

Cybersecurity teams are overwhelmed by information overload and the complexity of managing their cyber assets and attack surface.

What is the Need?

- Identify security gaps and targeted attacks earlier.
- Validate the health of the existing cybersecurity infrastructure.
- Create a risk-driven approach to exposure visibility and attack surface management.
- Deploy in minutes, get the results in hours.

The Platform

CyberCyte X-CTEM threat exposure and GRC management platform consolidates and prioritises threats, vulnerabilities and misconfigurations for responding to what truly matters.

Key Use Cases

- ENERJI-SA. Energy Dist. Company, with 30M customers. 50% E-ON Owned.
- QNB & BNP Paribas Turkey(TEB).
- Dogus Group is the owner of Global Brands Like Zuma, Amazonico and Coya.

Achievements

- Deployments on 20.000+ device networks.
- 100% success on unknown risk identification.
- UK Export Champion for three consecutive years.

Capabilities

Continuous Security Testing	Exposure Management	Attack Surface Management (ASM)
GRC Management	Remediation & Response	Threat Intelligence (CTI)
CyberCyte AI		

CyberCyte
RISK AND THREAT EXPOSURE MANAGEMENT

Don't let attackers exploit information overload to stay unnoticed.

Consolidate, Govern, and Respond with CyberCyte X-CTEM

Partnerships

Differentiators

SEGMENT	OVERVIEW	MAIN DIFFERENCE
XDR's	CyberCyte integrates with XDRs to ensure that XDR and other agents are healthy.	Focused on the assessment and the improvement of the cybersecurity infrastructure maturity.
Vulnerability Scanners	CyberCyte integrates with vulnerability scanners.	CyberCyte consolidates vulnerability scanning results and creates the remediation/response actions.
BAS Vendors	-	There is no similarity.
CTEM Vendors	CyberCyte is a threat exposure and GRC management platform.	CyberCyte is ahead due to its GRC and agent-based remediation response capabilities.
EASM/CTI Vendors	CyberCyte integrates with EASM/CTI vendors.	Focused on internal attack surface management and unified visibility.
Automated Penetration Testing Tools	Through vulnerability scanner integrations and its agents, CyberCyte performs a deeper security testing.	CyberCyte provides deeper visibility through artefact-based analysis covering threats, misconfigurations and vulnerabilities.

CyberCyte AI

- Automated Remediation & Response
- False Positive Minimisation
- AI-Based Contextual Enrichment
- Eliminate Shadow-IT
